Sustainable Management of Water for a More Sustainable Raw Materials Industry

29th May, 10 - 11.30 am

It is becoming increasingly well-known that Europe needs to secure a sustainable domestic supply of raw materials. In this context, it is crucial to promote sustainable management of the resources needed to deliver minerals and metals to the market.

For the European mining sector, one of these indispensable resources is water. It is in high demand for both production and the innovation required for decarbonization, and the Green Deal among others.

The EU raw materials mining sector presents current best sustainable practices in water management as well as to explore new technologies applicable to different national realities.

Line-up

Case study: *Efficient water management and zero liquid discharge*

- ≡ **Mr Emilio Sanjuán**, Environmental Manager, Atalaya Mining
- ≡ **Mrs Niddi Ögren**, Head of Environmental Affairs, LKAB

Panel discussion:

- ≡ **Mr Stefan Leiner**, Head of Industrial Emissions and Safety Unit, European Commission
- ≡ **Mrs Anne Plöger**, Advisor to MEP Hildegard Bentele, European Parliament, ITRE & ENVI Committee.
- ≡ **Mr David Granberg**, Senior Legal Counsel, Boliden Group
- ≡ **Mrs Niddi Ögren**, Head of Environmental Affairs, LKAB

Moderator

- ≡ **Mr. Rolf Kuby**, Director General, Euromines

Sustainable Management of Water for a More Sustainable Raw Materials Industry

Open access Online workshop
29th May, 10 - 11.30 am

Draft Programme

- ≡ Welcome and introductory remarks by Rolf Kuby, Director General, Euromines

- ≡ Keynote / case study session: *Efficient water management and zero liquid discharge*

- ≡ Panel discussion on Sustainable Water Management practices to further decarbonize the sector's environmental footprint

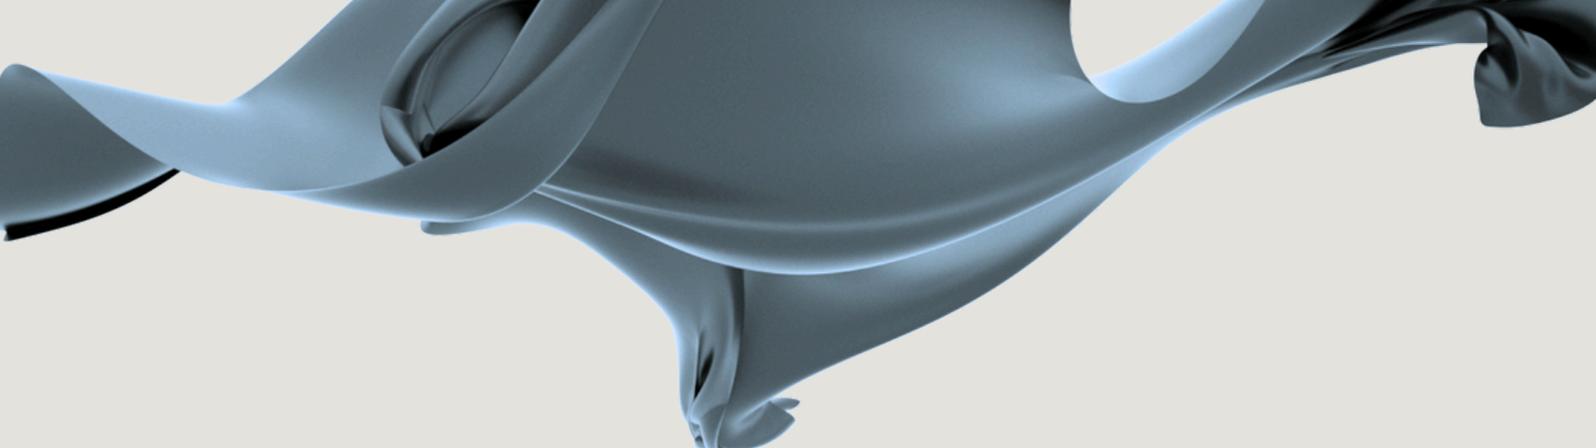

- ≡ Q&A Session

- ≡ Conclusions

Objectives of the event

- ≡ Promote sustainable water management practices to face the growing and upcoming demand for European sustainable raw materials.

- ≡ Explore the latest trends in sustainable management of water in mining activities, discuss technologies for sustainable water mining practices, and identify the key challenges towards Water resilience.

About Euromines

A viable and responsible minerals and metals industry providing the essential economic, social and environmental assets to society's sustainable development.
